

FUTURE INSIGHT 2030

Takes place on May 10th 2016 in Oslo – in collaboration with Innovation Forum Norway, InnoMag and ComputerWorld

The Future Insight-conference aims to take a closer look at where Norway is headed in regards to technological and social development, and how this will change the way we live and work over the next couple of decades.

The conference is now established as a leading arena arena for innovative thinking as well as an introduction to new trends that will change both how we work and the World as a whole. Status quo is changing faster than ever and the key is to pay attention in the devolpment to avoid being left behind. **By looking at weak** - though sometimes quite strong - signals in all the information that is available to us and analyse this properly, we can stay one step ahead in preparing for the new structures of tomorrow.

This year's conference will present an agenda that in a minimum of time will provide you with maximum insight into **where** we are headed, and **how** we can get there. Bring your colleagues and meet the future – in 2016, this might be the smartest move you can do for both yourself and your business.
